PROFESSIONAL SUMMARY

AI Engineer and Full Stack Developer specializing in scalable, production-ready AI systems using Generative AI and Retrieval-Augmented Generation (RAG). Experienced in LLM-driven applications, real-time backend systems, and cloud deployment on Azure and AWS.

EDUCATION

- Bachelor of Technology (B.Tech) in Artificial Intelligence & Data Science (AI & DS)
- Annamacharya Institute of Technology & Sciences, Rajampet
- CGPA: 8.6

CORE COMPETENCIES

- Programming: Python, JavaScript, Kotlin
- Full Stack: FastAPI, Flask, REST APIs, WebSockets, Next.js, Jetpack Compose
- Databases: PostgreSQL, MySQL, MongoDB (Vector Search), Blob Storage
- AI: Retrieval Augmented Generation (RAG), Prompt & Context Engineering, LangChain, MCP
- Cloud & DevOps: Git, GitHub, Docker, Azure, AWS

PROJECT EXPERIENCE

KisanSeva AI – Crop Recommendation & Farm Management System

Built an AI-powered agricultural system for crop recommendation and farm management using FastAPI, MongoDB Vector Search, and Azure.

- Implemented RAG pipeline with embeddings for contextual crop insights.
- Developed real-time APIs with WebSockets and automated cultivation scheduling.
- Integrated multilingual AI voice chat (LLM + TTS).
- Containerized and deployed on Azure WebApp using Docker and ACR.
- Designed and implemented complete system architecture independently.

API Repository: github.com/SanthoshDatturi/kisanseva-ai-api

Android Repository: github.com/SanthoshDatturi/kisanseva-ai-android

TECHNICAL STRENGTHS

- Scalable AI backend architecture
- RAG with vector databases
- Real-time and REST API development
- Cloud-native containerized deployment
