

Software Requirements Specification (SRS)

Internal Staff Holiday & Duvet Day Tracking Application

1. Introduction & Project Scope

1.1 Document Purpose

This document specifies the software, functional, data, and security requirements for a mobile-first internal application designed for a children's nursery with approximately 50 staff members.

1.2 System Overview

The system is designed to provide simple self-service tracking for employees' holiday balances, monthly payment requests, and "duvet days" (unpaid leave). It eliminates complex administrative back-and-forth by empowering staff to record their own metrics directly on their mobile phones while allowing back-office administrators to view, monitor, and export payroll-ready data seamlessly.

2. User Roles & Data Security

Privacy is a non-negotiable architectural requirement for this application. The system defines two distinct roles:

2.1 Staff Member (Employee)

- **Access Level:** Restricted Single-Tenant Access.

- **Security Rule:** A Staff Member must **only** be able to see and modify their own records. Under no circumstances should any API endpoint or UI route expose another staff member's metrics, name, or logs.
- **Platform Preference:** Optimised for mobile smartphones (iOS and Android browsers).

2.2 Administrator (Back Office / Manager)

- **Access Level:** Global Read/Write/Export.
- **Security Rule:** Secure access restricted to authorized management credentials. Administrators can view, filter, search, and export data for all 50+ staff members.
- **Platform Preference:** Desktop-friendly layout for payroll processing.

3. Functional Requirements

3.1 Staff Member Mobile Features

3.1.1 Authentication & Profile View

- **Secure Login:** Simple, secure token-based authentication (encrypted password).
- **Personal Profile Summary:** Upon login, displays the employee's name, role, department, and service years.

3.1.2 Holiday Balance Card (Annual)

Display the following live-calculating metrics clearly:

- **Holiday Entitlement:** Base annual allowance (e.g., 28 days).
- **Carry Over:** Unused days carried over from the prior calendar year.
- **Days Taken So Far:** Total booked/taken holidays in the current period.
- **Remaining Balance:** Dynamically calculated balance:

$$\text{Remaining Balance} = \text{Entitlement} + \text{Carry Over} - \text{Days Taken}$$

3.1.3 Monthly Holiday Payment Request Form

Staff can request to be paid out for holiday days inside the current month's payroll:

- **Input Fields:** * Number of Days (numeric, limited to the user's remaining holiday balance).
 - Target Month (defaults to current month).
- **Action:** Submit button. Submitting appends the request to the admin log.
- **Constraint:** No multi-level approval workflow is needed. The submission is treated as a final instruction record for payroll.

3.1.4 Duvet Day System (Unpaid Leave Tracker)

- **Annual Allowance:** Hard limit of 8 duvet days per calendar year.
- **Duvet Days Dashboard:**
 - **Used:** Running total of logged duvet days.
 - **Remaining:** Dynamically calculated: 8 - Used.
- **Action - Log a Duvet Day:**
 - Interactive date-picker to select the date the duvet day was/is taken.
 - Optional short note (e.g., "Car trouble", "Unwell").
 - On submission, increments "Used" and decrements "Remaining".

3.2 Admin / Back Office Features (Desktop Optimized)

3.2.1 Central Staff Dashboard

- A consolidated grid/table showing all 50 staff members with:
 - Name, Department, and Service Years.
 - Holiday Entitlement, Carry Over, Days Taken, and Remaining Balance.
 - Used vs. Remaining Duvet Days.
- **Quick Filter/Search:** Instant search by employee name.

3.2.2 Live Request Logs

- **Monthly Holiday Requests Panel:** Chronological list of all staff submissions requesting holiday payouts. Includes staff name, date of request, month requested, and days to pay.
- **Duvet Day Logs Panel:** Central list of all registered duvet days containing staff name, date of event, and timestamp.

3.2.3 Payroll Data Export

- **Action:** Single-click "Export to Payroll (Excel/CSV)" button.
- **Behavior:** Generates a structured .csv file containing compiled, payroll-ready columns including:
 - Employee ID / Name
 - Monthly Holiday Paid Days Requested
 - Duvet Days taken in current pay cycle
 - Year-to-date outstanding balances.

4. Data Dictionary & Mock Data (Data for Excel)

Below is the initial structured mock dataset. You can select, copy, and paste this table directly into Microsoft Excel or Google Sheets to establish your database tables:

Staff Name	Holiday Entitlement (Days)	Service Years	Carry Over (Days)	Duvet Days Used
Alice Jenkins	28	4	2	1
Bobby Henderson	28	1	0	3
Clara Thompson	30	6	4	0

David Kim	28	2	1	2
Eleanor Vance	32	8	5	0
Frank Martinez	28	3	0	4
Georgia Smith	28	1	0	2
Henry Cole	30	5	3	1
Isabella Rossi	28	2	2	5
Jack Sterling	28	3	0	0
Karen Patel	32	10	6	0
Liam O'Connor	28	1	1	3
Mia Johansson	30	4	2	2
Noah Williams	28	2	0	1
Olivia Bennett	28	3	3	0

5. Non-Functional Requirements & Architecture

- **UI Design:** Highly responsive, clean mobile-friendly and responsive, considering active nursery teachers on the move.
- **Performance:** Instant, zero-friction client-side rendering of calculations.
- **State Preservation:** State should persist seamlessly (for the live prototype, we utilize robust memory states; for production, light cloud storage integration is recommended).
